

The Mineralogical Society of Poland (MSP) was established on April 17, 1969. The Mineralogical Society of Poland continues to promote groundbreaking research across diverse branches of mineralogy, including descriptive and applied contexts. It aims at strengthening collaborations with international scientific communities and fostering scientific opportunities for the next generation of mineralogists. The Mineralogical Society of Poland stands poised to shape the future of mineralogical sciences and to propagate them within the Polish society and beyond. The headquarter of the Society is located at the AGH University of Krakow, whereas regional branches of the MSP are located in Warsaw, Wrocław, Sosnowiec and Kielce. The Mineralogical Society of Poland boasts a diverse array of specialized sections including: Section of Clay minerals, Section of Petrology, Section of Geochemistry. Currently, Mineralogical Society of Poland thrives under the leadership of Professor Jarosław Majka.

Polskie Towarzystwo Mineralogiczne

Mineralogical Society of Poland has been a member of the International Mineralogical Association (IMA) since 1973 and in 1999 the Society joined the European Mineralogical Union (EMU). The representatives of the MSP are members of several commissions of IMA.

Mineralogical Society of Poland

Events

The Mineralogical Society of Poland has a long-standing tradition of organizing the Meeting of the Petrology Group, a prestigious scientific gathering that brings together researchers, academics, and professionals in the fields of petrology and mineralogy. This event serves as a vital platform for exchanging knowledge, presenting recent advancements, and discussing key issues in petrology, mineralogy, and related disciplines. Through this tradition, the Society fosters collaboration, drives innovation, and promotes the continued development of mineralogical sciences in Poland and beyond. Additionally, thematic meetings of the Society's sections and branches are held regularly, encouraging dynamic discussions and scientific exchange.

The full list of events is available on the website:

Awards

The Mineralogical Society of Poland organises contest for the best master and doctoral thesis. The Competition is addressed to individuals who have completed doctoral and/or master's theses in the field of mineralogical sciences, covering the following research areas: mineralogy, petrology, applied and environmental mineralogy, as well as geochemistry.

Publishing activity

The Mineralogical Society of Poland conducts publishing activities and leads the editorial board of the Mineralogia journal.

The Mineralogia (ISSN: 1899-8291, e-ISSN: 1899-8526), a free open access journal that publishes original research and review papers from broad fields of geochemistry, mineralogy, petrology, technical, experimental and applied mineralogy, and environmental sciences. Mineralogia (formerly Mineralogia Polonica) is an English language journal with 50 years long tradition. The journal's subtitle, Geochemical, Mineralogical and Petrological Research, indicates the open character of the journal. The regular series Mineralogia is accompanied by the irregular series, including Mineralogia – Special Papers (containing conference abstracts) and Thematic Collections.
